[Sprecher 1]

So, tell me, how did you like it, how did you perceive both AIs? What's your feeling about that? For you it was a struggle of driving, but besides that, how did you interact or perceive the AI?

[Sprecher 2]

Do I have to add some kind of suggestions to that?

[Sprecher 1]

No, just like you were now sitting there, what's your first impression when you talked with the AI?

[Sprecher 2]

It was kind of the very first moment it was like good, like there's someone to calm you down, but then it was over repeating the same thing that was not solving somehow what I'm trying to do.

[Sprecher 1]

Yeah, because of the navigation problem.

[Sprecher 2]

Yeah.

[Sprecher 1]

So, which kind of AI scenarios you could perceive or liked kind of better, like you felt more connected to?

[Sprecher 2]

The later one, I believe. Why? The AI was more personalized, I believe.

It helped me throughout the situation.

[Sprecher 1]

Did you have an example?

[Sprecher 2]

I don't remember the example, but there was a certain spot where I got a feeling that this is now a personalized relation that I should take.

[Sprecher 1]

So, like the driver profile you filled out in the morning or yesterday, we used that to implement in the AI, to give the AI like a more personalized, customized behavior for you. So, what do you think? So, we have like at one scenario, we had like just AI and the other scenario would be like AI plus your profile.

Where do you think we implemented, which scenario was with the profile? The second one. The second one, I think.

[Sprecher 1]

It was in the second one, yeah. Second one, yeah. Okay, so you felt like correct, like that was our intention that like the idea was the second one should be like more personalized.

Yeah. Do you have anything else you want to mention about now the study and AI?

[Sprecher 2]

Yeah, just a few things that I think are not considered at this point. The one is this controller, which was...

[Sprecher 1]

Yeah, yeah, it was, yeah.

[Sprecher 2]

And then more specifically, like the map or the directions. That would have been super helpful. Or maybe if AI was just talking on the back of it, left here, right here, something like that.

[Sprecher 1]

Okay, all right.

[Sprecher 2]

Cool.

[Sprecher 1]

Thank you very much.

[Sprecher 2]

Awesome.
