[Sprecher 2]

All right, so how are you feeling? How did you like that and how did you perceive the AI in both conditions?

[Sprecher 1]

I mean in my first scenario it was really hard for me because I have never talked with AI in this way while driving because I was under pressure and I was so stressed so I was more focused on like finding my destination rather than getting some suggestions from others.

[Sprecher 2]

What suggestions?

[Sprecher 1]

It's like the AI was trying to understand my situation and also was trying to like give me some suggestion that how I keep myself calm.

So I would rather want someone to show me the location rather than like helping me emotionally. So yeah, but in the second scenario it was much easier because I was already familiar with the AI and I was already experienced with the like the routes and stuff so in the second scenario I was able to interact with the AI and it wasn't as bad as the first task. So I think the AI also understood me better in the second scenario and also suggested me like better, gave me better suggestions like how to keep calm, suggesting some songs and stuff.

So it was better in the task two rather than task one.

[Sprecher 2]

But you think only like better because you know the AI. Exactly, exactly. Okay, yeah.

Besides that, you filled out like at home like a personal driver profile questionnaire or I sent it to you. This one we used for the AI to try to make the AI more customized personalized for you. So it speaks like more that you feel more comfortable and perceive it more better.

Could you guess in which of those scenarios we had the AI with your driver profile? So one was just AI and one was AI plus the driver profile. Where do you think the AI plus questionnaire?

[Sprecher 1]

I think it's when it was suggesting me the route, the shortest route because I kind of tend to take the short route when like I have very short time to reach my destination. I hope in that case the AI was implemented with my driver.

[Sprecher 2]

Was that scenario?

[Sprecher 1]

It was in the first scenario. Yeah, I had to find a place for my job interview. So in that time, the AI suggested me the shortest route for me, which I would obviously look for.

So it is good.

[Sprecher 2]

So that was an indicator. Okay, now it sticks to your profile like well understood you in a way. That's interesting.

Yeah, the profile was actually in the first one. That's cool. That's nice results.

I had one other question. I forgot the question. Do you want to say something else which was something you enjoyed or didn't like?

[Sprecher 1]

Okay, the thing is that I enjoyed is in the second task, it was suggesting me some like songs or some like how to keep calm or in a situation like this when I'm so stressed. And in the first scenario, it was suggesting me the shortest route to reach my goal so that I can take my job. Also, it was emphasizing with me about that how would I feel and what might happen that I don't want to miss the exam.

I don't want to miss the job interview. So it was kind of exciting with my feelings. So it was really, really good.

I would say the things that I don't like was sometimes it was repeating one thing over and over again, which I don't really want. So that was the only drawback I would say for now.

[Sprecher 2]

Yeah, it was interesting that like you talked with the AI about the DSM and it already like used that to speak back. All right. Thank you very much.

[Sprecher 1]

You're welcome.
